

## Bulletin - Engineering Experiment Station Volume 35-43 (Paperback)

Filesize: 7.7 MB

### ***Reviews***

*Extensive guide! Its this kind of excellent read through. it absolutely was writtern very perfectly and helpful. Your way of life period is going to be change when you complete reading this ebook.  
(Murphy Dooley)*

## BULLETIN - ENGINEERING EXPERIMENT STATION VOLUME 35-43 (PAPERBACK)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 Excerpt: .Following, or rather merging, out of the dehydration period occurs oxidation and the decomposition of the carbonates. Both have started before dehydration is complete, proceed together with dehydration for several hundred degrees, and, as the temperature continues to increase, merge into the vitrification period. While oxidation proceeds at all temperatures, even atmospheric, if there is an available supply of oxygen, it does not take place at an appreciable rate until much higher temperatures are reached. Carbon-The presence of carbon in clays is a very common occurrence. In Coal Measure clays and shales it seems to be particularly abundant. It may occur as finely divided, free carbon, invisible to the naked eye, giving to the clay a very dark or black color; as more or less fine, granular coal derived from thinly coaly seams or partings in the clay bed that are difficult to remove; or it may occur in vegetable matter, such as rootlets, etc. At about 450C (Fig. 1)4 the oxidtaion of carbon is begun. It proceeds slowly for the next 100, then quite rapidly until it is completely driven off at about 1100C with reasonable time allowance. The oxidation of carbon, as well as iron and sulfur, requires, of course, an excess of oxygen in the surrounding atmosphere. Since the reaction is only effected through actual contact of the oxygen with the compound to be oxidized, an open porous texture is essential. This makes it quite essential that the burning operation be 1 Brown...
