RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 1144 pages. Dimensions: 9.7in. x 7.4in. x 2.2in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1836 edition. Excerpt: . . . is better in winter than in summer. If the weight of air thrown into the furnace had been made the same in summer as in winter, by increasing the power of the blowing machine, and the area of the blast pipes, it is probable that the working would not have been worse, in the former season than in the latter. An artificial heating of the blast should produce the same effects as that just alluded to, and it is by no means surprising that the efficacy of the hot blast has been doubted. It remains to be seen whence this effect results. M. Dufrenoy has, in his explanation of the advantages of the hot air blast, shown the difference between the quantities of heat introduced into the furnace with the hot and cold blasts, and in an assumed case has determined this difference to amount to about one-sixteenth of the heat evolved by the combustion of the fuel. Since less air is thrown into the furnace in using the hot blast, there is of course, on that account, less cooling effect to contend against than in the other case. M. Clément Desormes concluded by calculating from data in an assumed case, that the temperature within the furnace is increased between 270 and 330 Fab. by the heated air blast; an increase which he has succeeded in explaining all the observed effects. These theories are...
